Prof. James Bonham

Prof. Bonham is currently the President of the International Society of Neonatal Screening. In the UK, he leads the national laboratory for newborn screening. He's long been interested in diagnosing metabolic disorders in kids. He travels a lot to join meetings about organising and improving newborn screening. He's also curious about using genomics in newborn screening alongside regular tests. Additionally, Prof. Bonham leads a global group with the International Federation of Clinical Chemistry. They're working together to bring newborn screening to more places, especially in countries with fewer resources.
